About Me

I am an enthusiastic undergraduate pursuing a 4-year Information Technology degree with a specialization in Software Engineering (SE). Holding a diploma in Information Technology, I bring a solid foundation in technical concepts complemented by strong leadership and motivation. My professional experience includes serving as an Assistant in a Japanese class, where I honed exceptional communication skills, flexibility, and adaptability while collaborating with diverse students of varying personalities. Though outside my technical domain, this role enriched my interpersonal abilities, which I now leverage effectively in team settings.

Passionate about UI/UX design, RCM Workflow Analyze, and content creation, I am eager to blend creativity with technical expertise. I possess a keen eye for user-centered design, a methodical approach to managing evolving project requirements, and a flair for crafting engaging content. With a proactive attitude and a commitment to continuous learning, I am well-prepared to contribute to innovative software solutions and enhance user experiences in a dynamic professional environment.

WORK EXPERIENCE

Assistant at a Japanese Class

- Developed strong communication and interpersonal skills through collaborative work experiences.
- Enhanced flexibility and adaptability while managing diverse tasks and individuals.
- Gained valuable leadership and organizational skills in a dynamic team environment.
